Student Loan Maximum May Be Raised in Future

Pay Or You’re Out By February 14th

Students can have the second installment of tuition deferred if they have not received their O.A.P. grant cheques yet, in this case they must sign an agreement to pay by the end of the month or have their enrolment cancelled. Students who wish to pay before this date can do so at the Student Accounts office. If you have any questions or problems with regard to student fees, please contact the Student Accountant, Mrs. Stella McPherson, at 487-6135.

I sincerely hope we will be hearing from you shortly.

Yours very truly,

G. Foutz
Associate Registrar

Solutions To Club Budget Hassles

by M. Shain

In an effort to straighten out the bookkeeping mess in which Glendon has recently found itself, meetings were held last week between the business managers of the GCSU, PRO TEM, and myself. The following recommendations are proposals which were arrived at after consultation with the parties concerned. We hope to have them submitted to the GCSU for discussion and consideration.

1. One of the main problems seems to be the position of Business Manager. Books and accounts seem to be rather hastily passed from one to another with a minimum of explanation. The outgoing BM must meet with his successor and make some attempt to explain to him the finer points of this book. This would be a good idea for all of the referenda agencies as well.

The BM is a must for GCSU's financial operations. He must be a student with some accounting experience and be very familiar with the council policies and procedures. He should be a limited number of examiners at a time.

2. The real problem is the bookkeeping system. There is no standardized method of bookkeeping, in fact PRO TEM does not even have a set of books. Therefore, any GCSU work must be done out of large, expensive, and untrustworthy computer systems. The accounting department is not a credit agency. The BM can be of great help here. The bookkeeping system must be standardized, simplified, and made user-friendly.

3. No payment without receipts. This is a good system, although it may be hard to convince the students at first. The BM should keep a running book of all payments, and students should be given a receipt for their money. This will prevent the students from getting payment for services rendered while those services are not actually provided.

4. Meetings between the people handling the money and those elected to spend it should be held more often. The BM of the new account must meet monthly, at least, with the

President and the President should report the results of their meetings to the Council or the Executive.

The Business Managers of all referenda agencies should meet monthly with the BM in order to appraise their month-by-month financial statements. Their books should be up-to-date enough to present for examination at any time. This will avoid another situation in which a referenda agency finds itself broke. The BM of the GCSU should hold regular meetings with the Business Managers of the GCSU referenda agencies in order to be informed of their financial condition and to assist with any problems they may have.

5. All of these other recommendations become rather useless unless certain conditions are met. The fees must be approved by the Executive first. This should discourage the practice. Furthermore, the BM, the President or anyone else should be involved in cash dealings. Experience has shown that to be a very poor practice.

6. Meetings between the people handling the money and those elected to spend it should be held more often. The BM of the new account must meet monthly, at least, with the

President and the President should report the results of their meetings to the Council or the Executive.

The Business Managers of all referenda agencies should meet monthly with the BM in order to appraise their month-by-month financial statements. Their books should be up-to-date enough to present for examination at any time. This will avoid another situation in which a referenda agency finds itself broke. The BM of the GCSU should hold regular meetings with the Business Managers of the GCSU referenda agencies in order to be informed of their financial condition and to assist with any problems they may have.

The policy was established two years ago by the Vice President of Student Affairs, and all faculties including Glendon's Registrar Cyl Pike. Pike convinced him last year, that because of Glendon's intimate situation, referenda agencies were not necessary here. Last October those fees were not paid significantly higher at Glendon than at the other colleges.

The original intention according to the BM was not to charge students at all. However, the policy was reversed because of the high cost of bookkeeping. The BM has to handle the money, but it would be a poor practice.

In the late spring they would realize their error when they found the money and realize their error when they found the money. The policy was reversed because of the high cost of bookkeeping. The BM has to handle the money, but it would be a poor practice.

In the late spring they would realize their error when they found the money and realize their error when they found the money. The policy was reversed because of the high cost of bookkeeping. The BM has to handle the money, but it would be a poor practice.
A Different Direction And Ruthie Never Had It So Good

by Doug Graham and special guest author, Pat Sims.

I decided to take a different direction with this column by inviting a guest author to interview me, since nobody else would. I hope to give you some insight into the person who writes about bulls and sex maniacs.

Go ahead, Pat,

Pat: Why do you write about bulls and sex maniacs?

Doug: I write what I know about. After all, how could I write about something like women's discomforts? What would I know about that, apart from what I see in commercials?

Pat: Why don't you care about women's discomforts?

Doug: I don't know any women who care about my discomforts.

Pat: How come you took up writing?

Doug: Because I couldn't do any of the other shit kids do.

Pat: Is that the truth, or are you in love with your typewriter?

Doug: No, that's the truth. I'm not fond of shit.

Pat: What's your view on your columns?

Doug: As an outlet for my frustrations. It's not nearly as draining as rape.

Pat: Did you ever think about raping Ruthie?

Doug: Constantly.

Pat: I hope Ruthie doesn't go to this school.

Doug: Me too.

Pat: Was Ruthie really that good looking?

Doug: Does a pig stink?

Pat: Which column is your personal favourite?

Doug: I don't pick favourites, because if I picked a column I wrote on say, perversion, people would think I was perverted.

Pat: How do you feel about the lack of response to your columns in letters?

Doug: Doesn't matter, I can't read, and my dog ran away. But I'm pleased with their personal response.

Pat: What sort of personal responses have you received?

Doug: Many. Naked girls chase me all day.

Pat: Is that the truth or is it a dream?

Doug: Does a pig stink?

Pat: Does that leave time for a personal life?

Doug: Who needs a personal life with naked girls chasing you?

Pat: What are your views on women's liberation?

Doug: Does a pig stink?

Pat: What the hell do you mean, "Does a pig stink?"

Doug: If you're going to get nasty, I won't answer. F**k off.

Pat: F**k you, I'm a guest, besides, I didn't ask to interview you.

Doug: Well, if I had known you were going to be a big prick about it, I wouldn't have asked.

Pat: If I had known you were going to be such an inhuman bastard, I wouldn't have accepted.

Doug: How dare you use that kind of language in my column.

Pat: You started it. If you hadn't been such a son of a bitch, not caring about women's discomforts and blatantly lying about naked girls chasing you, we never would have regressed to this point.

Doug: I'm not even going to answer, this interview's over.

Pat: Wash a dish like you talking, it never started.

Doug: If this wasn't my typewriter, I'd break it over your goddam head.

Pat: Oh yeah?

Doug: Does a pig stink?

---

THE BIG ONE
Big taste, big satisfaction

by Doug Graham and special guest author, Pat Sims.

I decided to take a different direction with this column by inviting a guest author to interview me, since nobody else would. I hope to give you some insight into the person who writes about bulls and sex maniacs.

Go ahead, Pat,

Doug: Does a pig stink?
Happy Valentine’s Day,

Dear Valentine’s Day,

I have been thinking about you a lot lately. It seems like only yesterday that we first met, and now here we are celebrating this special day. I hope you are having a wonderful Valentine’s Day as well.

Love,

[Your Name]
Why Its Not Nice To Fool With Mother Nature

by Gail Mitchell

The potential for misuse of knowledge has always been nightmarish. With the recent development in genetics, the threat of disaster has never been so real.

In fact, for the first time in the history of modern science, research workers concerned with molecular biology have called a halt to their studies for fear of the consequences. And for the first time scientists are questioning their common, and generally unspoken assumption, that the acquisition of knowledge is always an absolute good, requiring no justification or ethical sanction.

More than 200 eminent scientists recently concluded an urgent conference at Davos, Switzerland, on the immediate dangers and projected future benefits of genetic engineering.

Researchers have realized that their latest achievement—the cracking of genetic codes—has opened the way to the designing of new bacteria which are potentially more dangerous to mankind than the atomic bomb.

In 1953 at Cambridge University, Dr. James Watson and Dr. Francis Crick discovered that the pattern of all life forms is determined by a double-helical molecule of deoxyribonucleic acid (DNA). Genes are molecules of DNA, unit of heredity. Since then scientists have found ways of cutting the long molecules into short pieces and recombining them. These splicings are then incorporated into bacteria to create new microorganisms whose potential for causing disease in plants, animals and man is yet unknown.

In 1969 when three biologists at Harvard Medical School announced to the world they had succeeded in isolating a virus from a bacterium, it was not without some misgivings. Although they felt their discovery could be used to cure such hereditary diseases as hemophilia, they warned of the dangers of government misuse of the technique. They feared they were unleashing on the world the same kind of mixed blessing as nuclear power.

They were not alone in their fears. Soon after the announcement Maurice Wilkins, 1965 winner of the Nobel Prize for medicine, warned that the isolation of the gene could lead to the development of a major germ weapon. "It is the kind of thing you cannot trust society with," he said.

Again in 1972, Australian microbiologist, and Nobel laureate Sir MacFarlane Burnet said he would, if he could, stop all experimental efforts to splice the genetic code of viruses that inflict grave illness or death in people. The danger he said, was the inadvertent creation in the laboratory of sub-species of a devastating virus against which humans will have no immunological defenses.

"The possibility for good in these experiments are trivial improvements, in vaccines, and not worth the risk," Burnet said. Despite the public warning from scientists in the field—it was not until this summer that some kind of positive action was taken—it is still too early to look seriously at the potential consequences of genetic engineering.

In July of this year, 11 American scientists, including Watson, declared they were halting certain experiments in genetic manipulation of bacteria. Their reason: if they do not stop they may accidentally release upon the world new forms of life—semisynthetic organisms that could cause epidemics, resist control by antibiotics and perhaps increase the incidence of cancer.

In a letter published in Science magazine (the magazine of the American Association for the Advance- ment of Science) and in Nature, the British counterpart, they urged colleagues around the world to stop experimentation with bacteria whose biological properties cannot be predicted in advance.

The group, chaired by Paul Berg, chairman of the Stanford University department of biochemistry, is buying time to consider hazards before rapidly developing research grows too large to be controlled.

According to Berg, the embargo is "the first I know of in our field. It is also the first time I know of that anyone has had to stop and think about an experiment in terms of its social impact and potential hazards." Many are unoptimistic about the embargo holding. One national institute of health (U.S.) scientist says, "Anyone who wants will go ahead and do it." Although, he adds, the technique requires a moderate degree of sophistication at the present time it will be a "high school project in a couple of years."

Others are uncertain whether the ban will be observed by countries interested in the new techniques considered potential in biological warfare. For example, many millions of dollars were invested at the U.S. Army's biological laboratory at Fort Detrick, Maryland in trying to prove the lethality of viruses and bacteria harmful to man.

Confidential already surrounds every proposal put forth at the conference in Switzerland.

Scientists at the University of British Columbia have gone ahead in application of genetic to the management of insect pests, offering benefits to agricultural and public health care. Their colleagues at Sussex University in England developed new strains of nitrogen-fixing bacteria that could cut down the need for fertilizer.

Industry is attracted by the prospects of new processes for the synthetic production of drugs, such as insulin.

Yet if some of the fast-producing deadly organisms were to escape from the laboratory in the course of experiments they could produce plagues that would make the Black Death of medieval Europe look trite, for there would be little hope for control. And dangerous materials have been known to escape from laboratories. Only recently, smallpox escaped from Porton Down, Britain's top security laboratory concerned with micro- biological research.

Although the problems are comparable to those associated with nuclear fallout, in that it affects everyone, John Kendrew, deputy director of the British Medical Research Council's Laboratory of Molecular Biology, thinks it's worse. "...in my opinion our present problem is even more difficult. Early nuclear research was contained within a governmental military establishment. Biological research can be done by competent people in any lab at any place. And for some of the work to be carried out behind a cloak of military or commercial secrecy would be doubly dangerous."

Scientific progress has always been erratic. It seems it has been impossible for us to protect ourselves from the changes. The different developments are uncontrolled...there is no master plan guiding the research. It is as if science has been waging guerrilla warfare against society...small teams of men, each working on its own little bit of business. Now many scientists would like to see an authoritative international body to advise specialists on aspects of research in the field that should be avoided.

Perhaps scientists have finally stopped regarding their subject as a curiosity and started treating it as the most potent force of our world. With some luck we may even be better prepared for the coming of the "biological age" than we were for the "nuclear age."

Something to "cheers" about:

Now the glorious beer of Copenhagen is brewed right here in Canada. It comes to you fresh from the brewery. So it tastes even better than ever. And Carlsberg is sold regular prices.

So let's hear it, Carlsberg lovers. "One, two, three...Cheers!"
Consumer's Diary: By Gosh What Is The Price?

by Allen Charles Rosen

Friday, February 8, 1975. I had a prescription for Phisohex, and Tri-G acne lotions filled at the pharmacy at Shopper's Drug Mart at Cedarcroft and Bathurst. The cost of the Phisohex was $4.59 and the cost of the Tri-G lotion was $4.52.

Saturday, February 9, 1975. I took off the dispensing label and noticed the original price tag of the Tri-G lotion. The manufacturer's suggested list price was $2.07 and Shopper's Drug Mart (discount?) price was $3.95. I figured that the 67 cents difference between my cost and the discount cost was the dispensing fee, which seemed reasonable, but what seemed unreasonable was the new discount price! The price was increased by $1.78 or about an 85% increase in price. I decided to get at the bottom of this apparent "rip-off" and so I telephoned the pharmacist at the Shopper's Drug Mart, at the Shopper's Drug Mart, a Mr. Berkowitz, who told me that his pricing system is "confidential", but that both prices that were marked on the label were his cost price! He was unable to tell me how both prices could be his cost at the same time.

In order to clear this up I decided to test another Shopper's Drug Mart store. I called the store at York Mills Centre and spoke to the pharmacist who was at first a little hesitant to speak to me and suggested that I speak to the manager, Mr. Haberman (who was not in at the time) about the problem. I then began to respond readily. Asked how Shopper’s Drug Mart calculates their dispensing fee, he said that all Shopper’s Drug Mart, because they are part of the "Par Cost" system, have their dispensing fees negotiated by the provincial government. He said that all pharmacies that are a part of the "Par Cost" system charge a dispensing fee. When asked about the pricing policy on prescription drugs, he said that "this is company policy" which "I cannot divulge". In other words, at this location, the pricing policy is confidential. I then called the Shopper’s Drug Mart at the Scarborough Town Centre, and the pharmacist, after telling him that I was writing an article for my school paper, said he was too busy to talk, but when pressed, said that they had NO DISPENSING FEE, and, their pricing policy was confidential.

What began as an innocent inquiry was becoming another watergate cover-up. No one seemed interested thus far in letting the public know what their pricing policy was. I decided to call one more store, and if they were not helpful I would call the head office. I called the Shopper’s Drug Mart at 4949 Bathurst St. and talked to the pharmacist. He said that all drug stores charge a dispensing fee, but he said his pharmacy was "competitive information". I asked him if the fee was negotiated by the government and he said that it was, and therefore public information. He said that the negotiated fee was only for pharmacists who dispense to "welfare" cases under the "Par Cost" system, of which Shopper's Drug Mart was not a member. When asked about his pricing prescription system, he said that it was "confidential"! I then called head office of Shopper’s Drug Mart at 255 Yorkland Ave. and there was no answer.

I then phoned Shopper's Drug Mart at 467 Parliament St. and inquired about the prices of Tri-G lotion (which cost me $4.52) and Phisohex lotion (which cost me $5.69). He told me that both lotions require a doctor's prescription, but that Tri-G costs between four and five dollars, but he said his policy was not to quote prescription prices over the phone. This is a little silly, I thought to myself, If I don't know how much something is going to cost me, how will I know how much money to take out of the bank to pay for the medications?

It seemed odd that a large company would advertise about their low, low prices, and then not tell you what they were. To resolve this dilemma I telephoned another location, this time at the Towne and Country Square. The assistant pharmacist said that she had no Tri-G but she does have Phisohex but she can't tell me how much it costs as this is the policy of the company. I told her that I needed to know how much money to take from the bank to cover the cost of the Phisohex lotion, and she said, "it will be less that $20.00". At this time, I was not in the mood to play the guessing game of "is it more than two dollars and less than sixteen", etc. etc. until I came up with the correct price.

I then phoned another store, 851 Finch Ave. W. I told my friend (who wishes to remain anonymous) I got the answer. The dispensing fee under Par Cost is $2.60, and this fee is set by the government. Thus, if you add the dispensing fee to the $4.52 cost of the lotion (the first store) you get $6.14. I can only infer that they were very generous to me and undervalued by, almost by, two dollars, and that some pharmacies can't be making very much money if they don't have any dispensing fees at all! Nor being a mathematician I leave it to the reader to figure out the numbers.

If you are an engineer, this chair could be yours.

This is where you could find yourself if you become a Maritime Engineering Officer in today's Canadian Armed Forces. The Master Engineering Control Centre of one of our new DDH 280 Destroyers will be less that $20.00. At this time, I was not in the mood to play the guessing game of "is it more than two dollars and less than sixteen", etc. etc. until I came up with the correct price.

If you're studying engineering, think about your work as they are of their ships. You could be a Maritime Engineering Officer in today's Canadian Armed Forces. No boilers. No stokers. No sweat!
Judge Rules Prisoners Have The Right To Attempt Escape

Los Angeles (ENS/CUP)---In a landmark decision, a California Appeals Court judge has ruled that under certain conditions a prison inmate may have a justifiable right to attempt escape.

The case in point centres around two women inmates from a narcotics rehabilitation centre in Southern California. They escaped after being continuously threatened with rape by lesbian inmates at the prison. The women contend that they complained to prison authorities several times to no avail and finally escaped to save themselves.

A trial court convicted the women of the escape charge after they were recaptured. That conviction was appealed and defense attorneys argued that the women escaped out of necessity.

Appeals judge Robert Gardner, in overturning the lower court decision, cited as a precedent a case in English court 238 years ago in which a judge ruled that inhuman prison conditions, "exceedeth the felony" of escape.

Gardner ruled that for the "defense of necessity" to be admissible, the prisoner must first have tried every recourse available to protect himself inside the prison and must have also turned himself in to authorities immediately after the escape.

The decision has been appealed by the state to the California Supreme Court on the grounds that the ruling is too broad.

But deputy state attorney Conrad Petermann acknowledged, "maybe now time has come," for the defense of necessity, to be admitted as, "a new defense."

Man Jailed For Shooting Way Into Bathroom

Knoxville, Tennessee (ZNS/CUP)---A Knoxville man has received a six month suspended jail sentence for being in such a hurry to use the bathroom that he fired five pistol shots through a locked door.

As Woodrow Harvey unloaded his pistol into the door, his son-in-law who was inside, was forced to scramble for safety out a window. The 58 year old Harvey told the court, "I was just trying to shoot the bathroom door open. It was locked and I had to get in there."

Judge Jewell Watson, who handed down the six month sentence on simple assault, told Harvey, "I advise you to get an extra key to the bathroom so you won't have to shoot your way in when you have to go."

Doper Mouse Taken Alive

Palo Alto, California (ENS/CUP)---Marty, the notorious marijuana mouse, has finally been taken alive by narcotics officials here.

Police officials have been hot on Marty's tail for about two weeks. The mouse was discovered living somewhere in the police department's evidence storage area, living on a steady diet of everything from marijuana to cocaine.

Repeated efforts to capture the mouse, halting him with everything from peanut butter and cheese to a female mouse proved unsuccessful until this week. A sophisticated Sherman Trap, which allowed him to enter but not to leave, was credited with making the pinch.

Police officials say they'll keep Marty as a mascot, confined to a cage in his favourite place—the narcotics storage room.

Judge Rules Prisoners Have The Right To Attempt Escape

New York, New York (ENS/CUP)---The first man who suggested seven years ago that house plants respond emotionally and physically to human actions, this week told scientists in New York that bacteria in yogurt experiences similar responses.

Cleve Backster, whose work was made famous in the book, "The Secret Lives of Plants," was joined by five scientists on a panel at the convention of the American Association for the Advancement of Science in New York.

The panel discussion was prompted by the increasing public acceptance of the notion that plants can interrelate with humans.

All five scientists rejected the theory, saying they've been unable to repeat Backster's original experiments. But Backster rebutted, saying he's gone on to new experiments, this time involving yogurt.

He says that when he pours milk into a bowl of yogurt in another room, an electronically monitored bowl of yogurt in yet another room responds by emitting electrical signals signifying pleasure. The responses he says, are emitted by the living bacteria in the yogurt.
Nader's Nonsense On Tour

San Francisco, California (ZNS/CUP) - Consumer advocate Ralph Nader is not the easiest person to accommodate when he is on the road. During a recent California lecture tour, Nader surprised officials of one college by refusing to ride in a limousine offered him. Nader, instead, asked for a pre-1970 American-built sedan which he felt was less pretentious and safer.

At a restaurant, Nader set aside his salad until the waitress could determine if the lettuce was organically grown and union packed. Finally, he demanded another hotel when he learned he had been booked into one controlled by the owners.

Disneyland, California (ZNS/CUP) - Mickey Mouse and Donald Duck have lost their battle to form a labour union of their own.

The National Labor Relations Board has ruled that Mickey, Donald, Goofy, Snow White and even the Three Little Pigs are "unskilled or at best semi-skilled individuals" whose work is not substantially different from hundreds of other characters employed at Disneyland.

The Shoe fits

Fiji Islands (ZNS/CUP) - A union representing gold miners in the Fiji Islands is seeking a 30 minute sex break to be tacked onto their normal lunch break.

According to Navita Raccone, a representative of the 1,600 member all male union, "the miners have found that noon-time is the best time for sex."

The union proposes to limit the sex breaks to married men only, said Raccone, "we don't want to overdo this."

If The Shoe Fits

Jarrettsville, Maryland (ZNS/CUP) - Cecil Slemp of Jarrettsville has come up with a reversed shoe that has the heel in front and the toe behind. Slemp has been trying to sell his invention to the Pentagon.

He believes the shoe has military possibilities in that it would leave tracks leading in the opposite direction than the wearer actually marched.

Workers Laid Off

Los Angeles, California (ZNS/CUP) - A pickpocket has been jailed on charges of not wearing his mittens.

Timothy Mack was arrested by police this week for violating his court order to wear mittens. Mack, it turns out, has been arrested on a number of previous occasions for pickpocketing.

Judge Richard Hayden eventually grew tired of sending the light fingered criminal to jail, so in 1971, he set up special probation conditions for him.

Hayden ruled that Mack would be able to spend his days out of jail on the condition that he always wore mittens on his hands in public. What's more, said the judge, the mittens must not permit, "the independent movement of the fingers."

Mack's freedom came to an abrupt end when police spotted him, with his hands bare, allegedly following a woman with a wallet. As a result, Mack is in jail awaiting a new sentence from the judge.

Senator Says It

Washington D.C., Maryland (ZNS/CUP) - The quote of the week comes from Mississippi Senator James Eastland, who sat in on one Senate caucus investigation alleged wrongdoing by the C.I.A.

During the discussion of the agency's intervention in Chile, Eastland asked, "what's wrong with overthrowing the government of Chile. It was a commie government wasn't it?"
An Ideal World Is Not Out Of Man's Reach

Richard Loogheed

"Do you ever ask yourself, "Is that all there is to life," as in one recent popular song. If you haven't and if the question seems ridiculous, then this article is not for you. I believe man inevitably searches for an ideal; that is his nature. Probably, most of you have searched for an ideal through philosophy, politics, drugs, alcohol, religion, money-making, meditation, sex or whatever. I know that I tried a few methods, but there was always something which was still missing. Now let us construct an ideal system for the whole world. This won't be mere philosophy (please excuse me, philosophy majorers) because it has a practical application. Naturally, everyone will not agree to all of the hypotheses, but please bear with me to the end.

First of all, this ideal system must begin with a transformation of the individual's attitude rather an imposition of the system from above. In this way, he will not rebel and it will be a grass-root system. There should be strict principles which nevertheless allow for extensive individuality and variety in application. All men must be equal under the system. To avoid coercion, every citizen must be allowed to freely accept or reject the authority (to be described later). The system would have goals. Every man would be fully and completely free to accept or reject these goals by us, in order to keep us motivated. The same holds for the same principles in the same direction. It should be immediate and continuing rewards for those who accept and follow the authority, as well as a final reward.

Note: Each citizen is doubly motivated to follow the authority while anyone who rejects the authority is penalized directly and indirectly by denying himself the rewards for allegiance. Nevertheless, this person is free to do textual and attempt to enjoy his enjoyment outside the system.

This system must provide a reason for existence and for our actions. It should promote love, joy, peace, understanding and gratitude (to the system).

Now, to achieve all this there must be a perfect or incorruptible and be a perfect or incorruptible and perfect authority, which could deal with all problems. In addition, each citizen needs a source of authority (perfect) near to him to be useable. And you are right, as long as man is in control of the system and a man is the authority. But what if the system is Christianity and this absolute authority is God. The intermediate authority is both the Bible, describing the teachings of Jesus Christ, and the Holy Spirit. In this way, we could personally contact God. Wouldn't this be ideal?

I know most of you will dismiss this as an old-fashioned fool's superstition, as I once did, but wouldn't this system be ideal, if it were possible?

We shouldn't judge Christianity by the parables we have met, anymore than we should judge the fallent community by several Mafia leaders or Marxist as represented by only Stalin. Many people use the title "Christian," as a social necessity or they may do it honestly without understanding most of the above conditions of the system. In addition, all true Christians are still imperfect and sinners, but they realize it and they should be attempting to continually improve. They make many mistakes but they should have a different attitude from those of non-Christians. How does this concern me? I say, try it for your-
Le roi avait beaucoup de problèmes. Il lui semblait que le plus grand était situé à l'autre côté de la Manche. Il y avait des fois quand il pensait que les Anglais et les Français ne s'entendaient jamais... Il y avait des fois qu'il venger, et c'est probablement ce qu'il avait eu au centre-ville de Saint-Foi à cette heure. Marie avait voulu qu'il reste au foyer pour s'occuper de sa mère. Elle semblait tellement triste de hier soir.

Le Prime Minister thoughtfully examined the land he had chosen to build on. It was indeed a beautiful site for a university, probably the most beautiful area he had seen in Toronto. There was presently a small college on the land, but it could be bought and re-established to suit his ideas. As he walked through the rose gardens and gazed up at the old building bathed in a mass of verdancy, a building which once was the home of one of the city's richest families, he sighed and almost wished he would be going to this college. What a college it would be! For the first time in the history of English Canada, there would be a truly bilingual institution of learning, in which young Canadians could come and learn and live in their native language. Perhaps it would be a bit ideal, but the Prime Minister was certain it could work. He knew it could work... there had to be a place somewhere in the land where young people of both cultures could come together to live, to learn, and to love. He ne savait pas exactement est-ce qu'il est venu à Toronto. Quand il était au CEGEP, il avait souvent souhaité, mais il ne savait pas où. Il était décidé de venir à Toronto parce que c'était la cap-

pital du Canada anglais, et dans cette ville il pourrait apprendre d'anglais. Son père avait toujours dit qu'il faut apprendre l'anglais si on veut se débrouiller dans le monde, et il pourr-
ait apprendre de la langue française. Il allait donc à l'université tout en continuant ses études poli-

tiques. Mais, quand il s'inscrit au collège, il avait trouvé que trois

cours de politique en français, donc il n'était pas force de prendre la plupart de ses cours en anglais. Il avait appris très rapidement l'anglais, mais il a manqué un cours quand même, à cause d'un langage technique qu'il ne comprenait pas. 

Il avait relevé la chemise d'une main et avait commencé à la déchirer. Il ne pouvait pas faire autrement. C'était l'heure de l'ouverture du collège, et il avait besoin de se changer de vêtements. Il était devenu très nerveux depuis qu'il avait entendu parler de cette nouvelle langue, et il avait besoin de se libérer de ses sentiments. Il allait à la bibliothèque pour trouver des livres sur ce sujet, et il espérait apprendre quelque chose de nouveau.

**Scene from a Marriage**

by Stephen Godfrey

Two years ago, the great director, Ingmar Bergman, made a six-part series for Swedish television starring his close friend Liv Ullmann, who has appeared in nearly all his movies since they met in 1965, and Erland Josephson, an actor best known outside Sweden for his performance as the doctor in Bergman's recent "Cries and Whispers." Together, these three were responsible for what turned out to be perhaps the most popular yet controversial television series that country had ever seen.

Encouraged by an American distributor, Bergman (who plans a second series next year), compressed his six-one-hour segments into four hours, then finally just under three. Even in this greatly condensed version, "Scenes from a Marriage (SFAM) is destined to be his most popular work in North America yet, and is being acclaimed as one of his best. By any standards, it ranks as one of the most honest, emotionally affecting, literate and memorable films in a long time. It also happens to be very entertaining and truly dramatic, and it strikes so many chords that are common in most of us that I can think of few people who would not be able to identify with a part of it. Some long-married couples may find it so true to life as to be overly-familiar and repetitious, but for the general movie-going, that thing that is often seen as a sign of the work's success.

The film is about an affluent couple named Johan and Marianne, and traces the breakdown of their relationship and their quest for more comfortable and predictable lives, after years of marriage. When a crisis forces them to reassess their life, they seek one another's help. The opening scene uses the simple and effective device of having the two sit down, in turn being interrogated about how we suppose is a woman's magazine aimed at presenting them as a sterling example of a model marriage, but when the interviewer asks them to define themselves in a few words, their answers reveal to us an imbalance that shows their arrangement is on shaky ground. Johan applies to himself such adjectives as mature, intelligent, but to Marianne. Here he looks to Marianne, who gives a demure nod—she is totally devastated when he with her unpredictable and petty complaints.

It would be a mistake to make fun of the word, distract us. There's something better to this couple, but to relationships that are common in most of us that is often seen as a sign of the work's success.

"Open-ended, slow-paced, and multi-climaxed" SCENES FROM A MARRIAGE

by Stephen Godfrey

Liv Ullman, in Scenes from a Marriage, Monday: Candu and Magician (with Bela Lugosi) at 7:00 pm. On Chien at 8:05 pm. In the Pipe Room Admission 50c.

2. Akkabin Dance on Thursday evening in ODH at 8:30 pm featuring ELVEN, Atkinson free, Glendon students $1.00.

Quebecois D'ici La Fin de l'annee

par Daniel Richard

Bonne chere lector, vu que rien ne change ici-bas et surtout pas vous, vous devriez &re done avec le plus grand plaisir que je confirme la nouvelle que l'annee derniere Harmony sera a Glendon le 20 mars au prix indique. Vous service de nos meilleurs souhaits a Andre Rousseau ma dite que c'est le meilleur groupe au Quebec... et mon ancien voisin de chambre et aussi qu'il est plus grand que je, je pouvais certainement un titre de "superbe spectacle, d'une classe definitivemment plus l'art de manquer." 

Vous aimeriez-vous si s'avancer a Jolly Hearts Club Band au mois de mars. Ben la, tenez-vous bien... ce n'est pas que pour ce qui est de boire, .. . mais pas non plus. Ca n'est pas une boisson... Les neges modernes a ton train et tous les membres du groupe espirent encore pouvoir s'en claire. Mais, comprends-t-on certainement, a jamais confias... il aurait jamais fallut de ne pas changer d'idée de id de, trois fois.

S'il y en a qui meieraient faire part de leurs commentaires, n'importe quel des ou jets dont il n'est meme pas fait l'ombre d'un reflet d'une illusion... je , ne me serais pas inquiete. 

Gros bisous a tous les malheureux qui n'etaient pas la semaine derniere.

Pour en retourn a Harmonium, et la soudain serieux, il s'agit d'un jeune groupe de musiciens. Leurs musique est tres bien construite et il apparaissent quelqu'un. Les gens aiment... Ils parlent de la ville mais sur un ton different de celui d'Octobre par Larry Guimond

Easy Going Concert

When the five ladies who compose the Buffalo Gals band walked on stage they took the old dinnhair by storm. With no fanfare of any kind, going stage show the buffalo gals lived up to their reputation. The band has a great amount of talent and draws upon all of its members beautifully. Bluegrass music depends on instrumental breaks and good harmony. Their performance was a grand job of both harmony and harmony. 

The Buffalo Gals material ranged from old favorites like "Wabash Cannon" to some original tunes that they have recorded. Their versions of the song "spicy" called "I'm Willing" by Sue Raines is probably worth the mention. However, the Buffalo Gals band did a great job sue deserves a special mention for her solo effort. 

The Buffalo Gals material ranged from old favorites like "Wabash Cannon" to some original tunes that they have recorded. Their versions of the song "spicy" called "I'm Willing" by Sue Raines is probably worth the mention. However, the Buffalo Gals band did a great job sue deserves a special mention for her solo effort. 

The Buffalo Gals expect that their first album will be out in late March or early April. It would be worthwhile to pick it up. The band is preparing a concert for the bluegrass festivals this summer. If their concert here at Glendon College is anything like the others, the performance will be a definite act to catch next time you get a chance.

Michael Haeck is a new act to Glendon last week and received a somewhat mixed reaction. Some people enjoyed the simple easy-going tour of the Buffalo Gals. Many people, including the Buffalo Gals, were fans of the Buffalo Gals. Haeck has always done, the new sound was uncomplimentary. Many people, including the Buffalo Gals, were fans of the Buffalo Gals. 

The people that were playing in the band are musicians from the Buffalo Gals. There was a lot of talent on stage that was worth appeased too. The lady vocalist and the fiddle player are good illustrations.

The people that were playing in the band are musicians from the Buffalo Gals. There was a lot of talent on stage that was worth appeased too. The lady vocalist and the fiddle player are good illustrations. 

From the Michael Haeck that we saw last winter, we know that if a performer seems to be headed in a good direction, he makes a rapid switch to a different type of sound? 

With his new sound Michael should be able to stay on top of the charts. If he had the old sound, it would have been guaranteed.

Le Medecin Malgre Lui

Moliere n'aimait point les medecins de son epoque. Il avait perdu ses enfants sous les yeux des medecins, et il avait-lui-meme une maladie douloureuse qui le fait souffrir. Donc ce n'est pas du tout etonnant qu'il soit place impriante a la maladie et a son cortge dans cinq de ces avenus... Donjon de l'A MOUR MEOURE, MENISCH DE POC de Moliere, LE MALADE IMAGINAIRE, et LE MEDECIN MALGRE LUI.

Le MEDECIN MALGRE LUI a été presenté pour la premiere fois le 6 mars au palais de l'etoile a l'#{201}cole de la voix.

Glendon Cultural Event of the Year

On Thursday, February 13, at 1:30 pm cultural event of the year will be held at the Glendon Art Gallery. Students from all across the College and even the odd faculty member, will present a fantastic show of scenes from plays and anything that can be performed in front of a small audience. There are no restrictions on what you can perform. Organizer Peter Kinsman has promised that all you need do is to get on it is to come to the Glendon Art Gallery and perform. But any show or so on Thursday, and get your act out there... you can be a lot of fun and very enjoyable to take part in. 

And now for the pre-amp... It is rumored that the very talented Sophia H. might be getting a little something together... Rumour has it that David T. may produce a small piece on David T's. We have had interviews. Michael O. will be performing with David S. and David M. are two definite, and it would be less than the norm to say that Michael G. would have been an act, but he had a series of meetings to attend. 

Glendon could use more of this kind of thing. We have had dances, concerts, forums, races, movies, dinner and stuff, but the O.D.I., we need now to have the people that make the Great minds... if it really is, the students themselves, to perform works of their own devising, or the works of one of the favourite authors. What could be better than an evening of music in Glendon College. A short one day program. 

So as you sit wondering what to do Thursday afternoon and not knowing what to expect coming to the Art Gallery and wondering what you have to perform, spectators will be as welcome as guest artist. Thursday February 13, Glendon Art Gallery Glendon. A short one day program. 

The turn out was small but those who were there enjoyed the show.
The Fat Old Men of Summer

It was a game between raucous writers and flabby broadcasters—but among the spectators were the unbeatable Yankees of the glory days.

I was back in the early 1960s, and I really wasn’t that much of a kid anymore, but I still carried an autograph book in my hip pocket wherever I went. Ever since running into Rocky Marciano in the monkey house of Manhattan’s Central Park Zoo I had made it a policy to be prepared, and it had paid off. Those jelly-smudged pages carried such gilded names as Duke Snider, Roy Campanella, Gene Woodling and Gus Triandos. I got them by hanging around wherever players were likely to be found. This chase for names once took me all the way to Bear Mountain. Each August the Yankees journeyed 40 miles up the Hudson to lend glamour to a game between sportswriters and broadcasters.

No admission was charged. Who would want to pay a bunch of mostly fat, mostly old men drop pop-ups, foul down and twist their ankles, forget to touch bases and bat out of turn? It was just a fun thing for the participants and for the 10,000 or so camp followers who came up from the Bronx.

But the Yankees were there. Though they didn’t take part in the game they were there, all the Yankees, the top-of-the-world Yankees—of Howard, Berra, Ford, Maris, Mantle and Skowron—breezing their way to their umpteenth pennant in the last umpteen years. No matter where they went kids stuck out, the throw thudding safely into the stands. I also realized—did the spectators notice, that we were in a bad spot. One slip by the writers’ first baseman, not apt to be a Vic Power with the glove, and the ball would connect with somebody’s skull.

The first baseman was Dick Young of the Daily News steel-gray hair, Zeko Bonura nose and, unlike most sportswriters, swarthy skin into which a good tan seemed to be enjoying itself, putting zip on the ball. He seemed to be sure of themselves, but, omed into a tender part of my anatomy. What the heck, I worked my way out to right field. The ball was by now a high, lazy fly, a slow roll, but I could pick up grounders. We in the line of fire waxed confi-

I also realized that everybody was looking in my direction—there at my feet was the ball, without which the game could not continue. I picked up and lobbed it back to Young, who had walked over to the crowd to see if anyone had been killed. It was a triumphal moment. I felt like Tiny Tim doing the two-step down Piccadilly on Christmas Night. Not only had personal tragedy been narrowly averted, I had come into close prox-

imity with one of my boyhood idols.

Nothing much was doing in the out-

ciled shorts. The broadcasters’ first batter grounded out, the throw thudding safely into Young’s glove and headed straight for us. The ball hit a woman’s wickerwork handbag and car-

tered into a tender part of my anatomy.

"Lordy," I thought, "I’ve been rup-
tured by Dick Young.

I soon realized the injury was not so horrible as it seemed, as the deflection had taken a lot of steam out of the throw.

You can calculate on the value of the SI-36 advanced scientific

FEATURES 14 digit readout (full size scientific notations) + throw-away or rechargeable batteries with adaptor + fully depressed keyboard with detent + special parentheses keys (2 level) + radical/degree mode selection key and lamp indicator + exponent key + change sign key + reciprocal key + square root key + 7 key + sine key + cosine key + tangent key + ARC key + Y key X key + (enable factor reversal) + commen log key + natural log key + common antilog function + natural antilog function + non-scientific + notation + large easy to read display + clear error key + zero suppression + low battery signal + overflow/underflow indicators + automatic floating decimal + full memory storage + one (1) year warranty + 10 day money back guarantee + includes rechargeable batteries + adapter/charger + handsome carrying case + features, functions and quality of other models priced at almost twice our price — $128.00
