Preparer Son Avenir

Le Centre de consultation psychologique et d'orientation professionnelle propose une "semaine de la profession", qui se tiendra à la Maison de la Culture (Pavillon Glendon — local 116), du 2 au 6 février. Cette semaine se veut informatif, présentant diverses possibilités de professions et directives, orientant les recherches.

Lors de la première journée, deux conseillères, Pam Broley et Alena Strauss, dirigeront un atelier sur la recherche de soi-même. Ceux, encore confus ou indécis face à leur avenir, pourront se pencher sur leurs intérêts et aptitudes, soutenus par les conseillères. Des maintenant, il est possible de s'inscrire pour cette journée au centre de consultation psychologique et d'orientation professionnelle ou en téléphonant au 487-6154.

Du lundi au mercredi se tiendront des ateliers où des sujets tels la préparation d'une entrevue, le marché du travail "caché", le retour au travail et les carrières traditionnellement réservées aux hommes seront proposés.

Le spectacle de Richard Seguin vendredi soir dernier à été couronné de succès. Le théâtre a accueilli un Seguin enchanté qui a réussi à soulever l'enthousiasme des 200 spectateurs présents pour l'événement avec des chansons récentes et d'autres tirées de ses premiers albums. L'artiste québécois effectuant un retour à Glendon après son passage chez nous l'année dernière. Vous pourrez retrouver cet événement dans la prochaine édition de Pro Tem.

Par Marie-Claude Petit

La semaine se clos jeudi par une rencontre avec des personnalités représentatives de diverses professions. Des gens ayant déjà étudié à Glendon, ou possédant un profil offert par le collège, parleront du cheminement vers leur propre profession, pour ensuite répondre à vos interrogations. On parlera des affaires et du droit (9:00—11:00), d'éducation et sciences sociales (11:00—12:30), des communications et méda (13:15—14:30) et politique et service civil (14:30—16:00).

Vous trouverez des informations supplémentaires au sujet des activités proposées lors de la semaine de la profession sur le babillard près de la salle des arts.

Lors de la rencontre de la jeunesse franco-ontarienne, tenue à Sudbury, une majorité de jeunes ont souligné l'être point préparé à affronter le marché du travail. Diplôme à la main, on se heurte à des portes closes. Cette semaine de la profession offre une panoplie d'outils nécessaires pour aborder le marché du travail avec succès.

A Coke In The Machine

By Robert Delaney

If you are an avid Radio Glendon (RG) follower, then you might have noticed that during the first week of this semester RG was not on the air.

Ken Bujold, manager of RG, explained that RG's six day absence from broadcasting was initially due to the "accidental" spilling of a can of Coke on the station's four channel mixer.

Evidently an open can of Coke was left in the broadcasting booth at the end of the last semester. While cleaning the station at the beginning of the term, the can of Coke was inadvertently knocked over onto the mixing board. Shortly thereafter, certain members of the RG staff established that rewiring the mixer was required to repair it, so the mixer was sent to the dealership along with a request for a rented replacement. Unfortunately, a suitable substitute mixer was not available at the time, thus RG stopped broadcasting and Café de la Terrasse piped in some FM for its patrons.

On January 11th, RG received their replacement mixer which they are presently using to broadcast in the pub.

During RG's unforeseen six day sabbatical, Ken Bujold has been asked some rather direct questions by the GCSU (Glendon College Students' Union) Council concerning the "accident." These questions include "Why did it happen?" and "Where is the money coming from to repair the mixer?"

As far as RG is concerned, the $150.00 it will take to repair the old mixer and rent the stand-in will come from last year's budget of which the GCSU has $1,200.00 in arrears. Furthermore, Ken speaks quite frankly concerning the fact that RG, not to mention another of Glendon's major fiscal recipients, have not seen a penny of their 85/86 budget yet.

Ken believes that GCSU's mismanagement of funding over the years has contributed to a deficit of some $13,000.00 which the 85/86 Council has inherited. The GCSU, said Jas, has been doing a "juggling act" with this year's funding so that they can make some interest to ameliorate the deficit.

When Jas was confronted with the question "Why is the GCSU behind in last year's budget payments?" He replied that GCSU mismanagement of funding over the years has contributed to a deficit of some $13,000.00 which the 85/86 Council has inherited. The GCSU, said Jas, has been doing a "juggling act" with this year's funding so that they can make some interest to ameliorate the deficit.

Since there are no set dates for disbursement of budget funds, the GCSU Council does not have to make specific the time of year when funding is received, but he assures all those who have been promised money by the Council that they will receive it by April 30, 1986.

In reply to the fact that RG has not been given any of their 85/86 budget, Jas claims that all of Glendon's fiscal dependents have had enough money to carry on normal operations. Furthermore, long range planning should not be stunted for RG because the money has been committed to them by the GCSU, and they will receive it by April 30, 1986.

When asked if the GCSU's "juggling act" is working, Jas responded by saying that "the rollover from this year to the next should be much better." One could take this to mean that next year's budget payments will be appropriately spaced throughout the year.

CONCH SHELL

This technique was first established by residents of the Seychelles Islands who used it to attract passing pods of sperm whales. Each pod, consisting of one or more whales, produced a sufficient wake to permit local residents to host 12 consecutive international surfing championships. More recently, conch blowing has become popular at numerous seaside watering holes where it was found to attract considerably more attention than the more conventional "Excuse me...waiter."

SEMAPHORE

Or flag flapping as it is often called, enjoys considerable popularity among the nautically inclined. Practitioners of this particularly colourful form of communications have reported physical benefits such as an increase in the size of bicep, tricep and pectoral muscles. This has prompted one enterprising manufacturer of sporting equipment to introduce a new product called "Heavy Flags." This means that when calling for a Blue it is now possible to get bent into shape.

TIN CANS WITH STRING

Success with this approach depends largely upon the size of the cans and the length of the string used. Most waiters or waitresses will show some reluctance at the prospect of walking about their establishment with 50-gallon oil drums affixed to their hips. An empty Blue can (preferably of the larger variety) is considered de rigueur. Users should be advised that calls across the bar are cheaper after six and on Sundays. Important: Many first time users of this proven technique have complained of what is generally referred to as the "Lloyd Bridges or Jacques Cousteau effect." This can be remedied by making sure that cans are completely drained prior to transmitting or receiving messages.

ONE IN A SERIES OF HIGHLY INFORMATIVE PRESENTATIONS AIMED AT HELPING YOU TO BETTER UNDERSTAND THE DIVERSE MEANS IN WHICH IT IS POSSIBLE TO OBTAIN ONE OR MORE BOTTLES OF BLUE, CANADA'S MOST POPULAR BEER. FOR THAT CLEAN, TRUE TASTE.

Le Réseau des femmes du Sud de l’Ontario, ça vous dit quelque chose?
Fondé en 1982, suite à une longue journée d’études, les représentantes des groupes de femmes du Centre-Sud de l’Ontario, ont décidé d’unir leurs forces pour former un organisme pour défendre les besoins des femmes francophones de l’Ontario. Là est l’origine de cet organisme.
Prenant conscience des lacunes sérieuses dans les services, les ressources et les programmes destinés aux femmes francophones, le Réseau se veut un instrument de coordination et de mobilisation, un porte-parole qui puisse résoudre les principaux problèmes que rencontre la femme francophone.

Sympo rimum
Quelle place occupera le Réseau dans le contexte ontarien?
Quelles seront les nouvelles démarches que les femmes francophones opteront d’entreprendre?

Announcing Career Week’s Film Series
By Elizabeth Schall
This February 2nd to 6th, the Glenendon College Counselling and Career Centre is organizing the second annual Career Week at Glenendon. This year we are combining workshops on career planning with a two-day lunchtime film series exploring work-related issues, and especially, issues for working women.
Eight films have been chosen focusing on such topics as non-traditional careers for women, sexual harassment in the workplace, technology, deskilling, and unionization. The films are generally lively and entertaining and do so with a high degree of skill, autonomy, and responsibility. They fight sexism and hostility on the job by organizing and challenging traditional assumptions.

11:30 - Femmes au travail 1 - ce film présente quatre femmes qui achèvent des postes importants - une pilote de hovercraft, deux mini-satellites, et une architecte qui travaille dans une grande corporation - c’est un exemple de situations préconçues de ce que la femme peut accomplir.

12:15 - Union Maidis - Business replies - an alternative to unionization from members of the business community.

Wednesday 5 February
11:00 - Good Monday Morning - examines issues faced by women in white-collar "ghettos" - day care, technology and deskilling, and the potential hazards of VDTs.

Don’t Need No Competency Test
Edmonton (CUP) -- The University of Alberta’s writing competency test is a waste of time, says U of A English professor.
"It is not a proper test of the language at all," said Gerald McCaughey of the department lies on the discipline itself," he said. "The courses give the test.
McCaughey said students who shouldn’t have to write the test.
"I didn’t see the need to take the remedial test because of my English mark.

U of A registrar Brian Sizer said a passing grade in an English course is not acceptable because the university doesn’t have an English composition course that teaches basic language skills.
"The emphasis of the English department lies on the discipline itself," he said. "The courses teach literature, not writing skills."

The remedial course costs $60 and is administered by the U of A teaching and remediation committee, which also gives the writing competency test.

"You don’t put the tester and the remedial programme together," said McCaughey. "That’s like letting the people who test for driver’s licences give compulsory driving schools."

Lorna McCallum, testing and remediation chair, said the Continued on Page 5
Il y a un point qui soulève la contestation au Collège Glendon. Lorsque les étudiants se préparent à graduer, ils s'aperçoivent que la langue de leur diplôme est déterminée par leur courant linguistique. Les étudiants du courant bilingue ne peuvent recevoir qu'un diplôme alors que ceux inscrits au courant unilingue ont le choix entre un diplôme latin ou bilingue. Exposés à un choix aussi limité, plusieurs gradues se sentent dupes. Les étudiants bilingues peuvent préférer le diplôme latin plus traditionnel.

Wayne Burnett, président de l'Association des étudiants de la Faculté d'Éducation (FESA) a écrit une lettre au Conseil de la Faculté de Glendon demandant que cette politique soit changée; les gradues devraient être en mesure de recevoir le diplôme de leur choix. Ses idées de même que son initiative sont valables et devraient être considérées sérieusement à la première opportunité.

Un diplôme universitaire est une réalisation exigeant beaucoup de détermination et de persévérance et devrait donner satisfaction aux étudiants.

Letters

Dear Editor:

In response to Mr. Chusid's letter (Pro Tem, Vol. 25, No. 13, page 4) we, on behalf of the Glendon P.C. Association, humbly ask Mr. Chusid to consider the following:

Firstly, we prefer our reading week travel plans to include: One week on the southern shores of France (perhaps Nice), four chauffeur driven limousines (one for each direction), several bottles of Mouton de Rothschild, an adequate supply of beluga caviar, and a copy of every Who album ever made.

Secondly, take heed to these wise words: "It is easier to be critical than it is to be correct." Benjamin Disraeli

Consider also:

a) We have trusted a socialist at all.

b) We would rather live to be a Conservative for sixty years than thirty years a socialist, thirty years a liberal, and then (upon our sixtieth year) suddenly realize that we had wasted our entire political lives.

Thirdly, Mr. Chusid has tragically failed to understand the true essence of Conservatism. He confuses the term "Conservative" with "Conservative". May we suggest that he take the MODR 1715.06 logic course; perhaps then he would develop some kind of ability to reason. In doing so, Mr. Chusid would discover that being young and being a Conservative is not a contradiction in terms. We forestall nothing.

So how can Mr. Chusid obtain a proper perspective on life? We recommend several solutions:

a) Have your hair groomed and shoes shined each and every morning on Bay St.

b) Stop identifying with Grace Slick and start identifying with David (I been hypnotized) Letterman.

c) Buy an Art Gallery, charge admission, and enforce a dress code.

d) Read "What They Don't Teach You At The Harvard Business School".

Simply broaden your stock portfolio.

Elliot, don't take offence; all we ask is that you open your eyes to reality. At the age of forty, you may wind up with nothing but faded blue jeans and failed aspirations from your youth. Oh yeah, we were not offended by your remarks. In fact, they were taken very lightly. This year, Elliot, why not attend a few P.C. Youth bashes? Remember, they only called the Progressive Conservative a party after the first Youth convention.

Kenneth Haines and Carey Nieuwhof

Members of the Glendon P.C. Association

There is one small point of contention at Glendon College. As Glendon students prepare to graduate, they discover that the language of their diplomas is determined by their language stream.

Students of the bilingual stream can only receive a bilingual diploma, while unilingual stream students have the choice of either a Latin or bilingual diploma. Faced with a limited set of options, many graduates feel cheated. Bilingual students may prefer the more traditional Latin diploma.

Wayne Burnett, Faculty of Education Students Association (FESA) president, has written a letter to the Glendon Faculty Council with the request that this policy be changed. Bilingual graduates should be able to receive the diploma of their choice. His ideas are good and should be acted upon at the earliest opportunity.

A person's university diploma is a hard-earned achievement and should be something graduates are happy with.
NEED ADVICE??

Pro Tem will be beginning an advice column as a regular service to our readers. Students who have either personal or academic problems can receive confidential, free advice through this service. Letters in French or English will be answered. Letters should be addressed to this column and sent to the Pro Tem office.

Continued from Page 3

remedial test is essential.

"The test diagnoses the problems and students take the remedial course to help them," McCallum said. Silzer said that 8000 students required to take the test, only 22 have been unable to pass it while 63 have not yet attempted it.

"Students who fail to pass the test by Nov. 29 will have to discontinue their studies for a term," Silzer said. "There will be no academic penalty and their fees will be refunded."

The U of A student council and the engineering students' society plan to run seminars to help students prepare for the test. The seminars are free and will be operated by English graduate students, said student council vice president Caroline Nevin.

"Unfortunately, we won't be teaching them English. We will be teaching them how to pass the test," Nevin said.

Prepares vos Equipes!
Get your teams ready!

Teams must be half male/half female with a minimum of 8 members and a maximum of 12 with 1 substitute of each sex. Team lists must be submitted to the GCSU office to Stan Gorecki by Monday, January 27. Les équipes doivent être moitié hommes/ moitié femmes avec un minimum de 8 membres et un maximum de 12, et un substitut de chaque sexe. Les listes des équipes doivent être soumises au bureau de l'AECG, à Stan Gorecky pour le lundi 27 janvier.
**Par Maryse Gaouette**

La plupart d'entre nous ont déjà entendu un commentaire semblable à celui-ci : "Quand j'étais plus jeune, nos hivers québécois étaient de vrais hivers et on allait dans le sud pour se faire bronzier. Maintenant, si on va dans le sud, c'est pour manger des oranges congelées". Beaucoup de gens le croient. Est-ce un fait vérifiable? Est-ce vrai que la température moyenne annuelle au Canada augmente alors que celle au sud s'abaisse? La croyance populaire n'a pas tout à fait tort; il est vrai que la température est en train de changer, mais l'écart est si minime qu'il nous est impossible de le remarquer sans utiliser d'appareils destinés à cette fin. Ce changement, bien que minime, n'est pas sans conséquences graves.

**La Terre: une immense serre**

Tous les gens connaissent bien les avantages de posséder une serre. Alors que la température extérieure est trop basse pour la survie des plantes, la serre permet aux rayons infrarouges de pénétrer la vitre mais retient cependant la chaleur à l'intérieur. La vitre offre donc une résistance au retour des rayons vers l'extérieur mais pas dans la direction inverse. Le gaz carbonique et les autres constituants radiosensibles (l'oxyde d'azote NO₂, le méthane CH₄ et les chlorofluorocarbones) jouent le même rôle dans l'atmosphère que la vitre de serre. Ces produits, une fois libérés, changent la composition de l'atmosphère et ce, à l'échelle mondiale. Cette nouvelle composition n'oppose toujours pas d'obstacle aux rayons infrarouges qui atteignent les couches inférieures de l'atmosphère, elle retarde, par contre, le dégagement de chaleur de la terre vers l'espace. Il en résulte une élévation moyenne de la température mondiale. Ces gaz ne sont pas les seules causes de changements de climat mais sont probablement les plus importantes.

Il ne faudrait surtout pas confondre la couche d'ozone avec le gaz carbonique libéré dans l'atmosphère. La couche d'ozone est la substance qui entoure la terre et attire les rayons ultraviolets provenant du soleil. Il y a quelques années, on croyait que l'utilisation d'aérosols pouvait détruire cette mince couche protectrice qu'est l'ozone. Les scientifiques ont découvert, par la suite, que la couche d'ozone, bien que très mince, était très stable.

**Incertitude chez les scientifiques**

Il est bien évident que la composition de l'atmosphère est en changement. Est-ce pour le meilleur ou pour le pire? Il est impossible de répondre à cette question avec certitude, car différentes composantes entrent en ligne de compte. C'est un fait, les concentrations atmosphériques de CO₂ (gaz carbonique) sont de plus en plus grandes—soit une augmentation continue et croissante supérieure à 8% au cours des 25 dernières années. Les scientifiques sont bien d'accord sur ce chiffre qui est le résultat d'un projet de recherche de l'Organisation mondiale de la météorologie (OMM). Il est toutefois difficile de prévoir la composition future de l'atmosphère car on sait très peu sur le cycle naturel du carbone dont l'effet pourrait aller en s'accroissant ou en diminuant. On peut s'attendre à une augmentation de consommation d'énergie donc à une émission plus élevée de gaz carbonique. En fait, même si l'on ne connaît pas le cycle du carbone, on sait que la quantité de CO₂ émise ira en augmentant. Ce que l'on ne sait pas, c'est son effet et sa réaction au cours des années lorsqu'il est mêlé à d'autres substances. Il est d'autant plus difficile de juger des conséquences possibles du gaz carbonique sur l'environnement étant donné les interactions océan-atmosphère et les nuages.

**Ligne de conduite adoptée**

**Conséquences économiques**

Dans le par Environnement et les économies des pays à plus développées, de plus en plus de ressources sont consacrées à l'agriculture et à l'agriculture durable. Les chercheurs du monde entier étudient le problème de l'atmosphère et de la température mondiale. Ils cherchent des solutions pour réduire l'effet de serre et pour préserver l'environnement pour les générations futures.

des pertes de 1 milliard de dollars en hydroélectricité. Après avoir étudié le climat actuel et futur de l’Arctique, on en a conclu qu’il serait possible de pratiquer dans les régions de Yellowknife, Whitehorse et Fort Simpson une agriculture semblable à celle d’Edmonton. Par contre, il se pourrait que le risque de sérieuse sécheresse augmente dans les Prairies causant une diminution de la récolte de blé. De chaque côté du pays, une élévation de 5 à 7 mètres du niveau des mers entraînerait des inondations. Par exemple, l’île du Prince Édouard serait divisée en quatre îles, perdant ainsi 13% de sa superficie tandis que certains centres industriels et commerciaux situés à Victoria et à Halifax pourraient disparaître sous les flots. Cette élévation du niveau des mers serait causée par la fonte des glaciers de l’Arctique.

Cesser d’émettre le gaz carbonique n’est pas la solution

Maintes personnes, après avoir pris connaissance des conséquences possibles d’un réchauffement mondial annuel de la température, organisent des manifestations, signent des pétitions, etc. dans le but d’empêcher les industries de polluer l’air. Ces moyens de pression ne sont pas inutiles, car ils font comprendre aux compagnies et industries l’importance qu’attache le public aux questions environnementales. Cependant, malgré l’aide financière offerte aux industries par le gouvernement pour améliorer l’équipement destiné à assainir leurs émissions de polluants, très peu d’améliorations ont été faites. Les compagnies ne sont pas les seules à blâmer. Il est vrai que le gouvernement essaie d’aider les entreprises à s’équiper pour diminuer les émissions de polluants, mais son aide n’est pas suffisante. (Le gouvernement est aux prises avec des problèmes à court terme très importants tels que le chômage et la dévalorisation du dollar). Les compagnies devraient donc débourser la majeure partie des frais encourus pour le changement d’équipement ce qui entraînerait une hausse des prix de leurs produits et leurs prix ne seraient plus compétitifs avec les prix des produits offerts par leurs concurrents étrangers.

Certs fansatiques souhaiteraient retourner 2 000 ans dans le passé et bannir tout ce qui émet le gaz carbonique en grande quantité. Ceci est impossible. Il est toutefois possible, si chacun y met du bon vouloir, de diminuer la quantité de CO2 émis dans l’atmosphère soit en économisant l’énergie nécessaire pour chauffer la maison, soit en utilisant les transports en commun ou bien en équipant l’automobile d’un catalyseur.

Sauf donnée la croissance de la population mondiale imaginez les conséquences si les pays en voie de développement s’industrialisent en commettant les mêmes erreurs que nous avons commises), ces mesures de restriction ne sont pas suffisantes. Il serait à souhaiter que les environnementalistes étudient les résultats d’une élévation de la température moyenne annuelle afin d’appliquer des plans d’attaque.

Le jeu en vaut-il la chandelle?

Toutes les conséquences mentionnées auparavant peuvent vous paraître incroyables ou même exagérées. Vous n’avez pas tout à fait tort : certains scientifiques n’y croient pas non plus à cause de tous les facteurs qui pourraient intervenir dans le processus du réchauffement en faisant augmenter ou diminuer les effets. Il est difficile de concevoir que le “progrès” humain puisse avoir de telles répercussions sur notre environnement, notre TERRE.

Que l’on ne ferme pas les yeux sur la réalité : le climat est en constant changement et ce, depuis la création de l’univers. L’homme ne fait qu’accélérer le processus. Reportons-nous à il y a environ mille ans quand les Vikings ont établi une colonie sur la côte sud-ouest du Groenland. Les cols se mouraient alors de leurs récoltes : fruits et céréales. Quatre cents ans plus tard, cette colonie avait disparu à la suite d’un refroidissement de la température. C’était il y a quatre cents ans. Nous ne dépendons plus autant de Mère Nature en apparence, mais notre survie n’est pas pour autant assurée indépendamment de la température. Nous n’en sommes pas à un point aussi critique, mais est-ce que ça vaut la peine de courir le risque et de ne rien faire pour améliorer notre environnement? Ne devrait-on pas faire un effort pour sauvegarder la terre, notre plus grand héritage malgré tous les sacrifices que comporte cette décision? Le jeu en vaut-il pas la chandelle?
Nightmares Beyond The Looking Glass
The True Story of Mrs. Alice Hargreaves

By Catherine Bryson

"Welcome to what we hope will be a new Wonderland for an Alice who is ever young" — reads the enormous heart-shaped card on Mrs. Hargreaves’ dressing table in her equally enormous suite at the Waldorf Astoria Hotel in New York City. The admirers of the "real" Alice, the little girl that the Rvrd. Charles Dodson (known as Lewis Carroll) wrote about in his Alice In Wonderland, are no doubt paraphrasing the final passage in his book, in which the author hopes that Alice will stay us young in her spirit as she was that Victorian era. Equally remarkable is Amelia Shankley as young Alice, whose character is based on the supposed facts of the "real" Mrs. Hargreaves’ life.

Like other extraordinary movies of this nature which are based on actual lives and events (I might mention Mask, Out Of Africa, The Emerald Forest, and many others of this recent trend), tend to inspire on the part of the audience a certain awe feeling which may undercut the artistic strength of the film. For this reason, comments as to "how platonic the relationship between the Rvrd. Dodson and young Alice really was," all made, and whether "she really was such a bitchy old cow" and whether "she really could have been so motive-grubbing as to endorse soup brands and other "commercial things" in the name of Alice In Wonderland", and so on.

This viewer found very few faults within the movie; however, there were some comic situations along with a great climax. I won’t mention it in order not to spoil the movie. Iron Eagle, and here anti-Americans can stop reading, for a nice change has the U.S. "kick ass" (directly quoted from the film) instead of being embarrassed by some small Middle East nation. Even further, and for some very frightening; and for myself, about time — the U.S. President is not seen as a "peanut" but as a "man of action". Finally, to put it simply, the dialogue was in my language. Crush!!!

The Iron Eagle Flies High

By Mama T

As the hit movies of this decade are proving, the old style Western movie is back. The only difference is the calvary rides F-16’s instead of horses. If you enjoy seeing a movie where the good guys never die, underscored by great music as We’re Not Going To Take It Anymore, where sassy brats can "borrow" millions of dollars of equipment, go see Iron Eagle.
The mood was set for the movie by the Q107 personality (at the premiere) who said "if I want to see a teenaged Rambo... Since almost every possible imaginative plot has already been explored, the writers decided to use the standard, well-worn but still popular "We’re Americans and by gawd no one better mess with us". Without ruining the ending of the movie (which, of course, is sooo predictable), a unique type of American truth is demonstrated. It makes you wonder how much the American public really knows about their own internal affairs.

One benefit for Canadians...
Despite personal hardships, Karen Blixen (Meryl Streep) grew to love her adopted country and its people.

**The Insomniac**

Wink Martendale: Our Strongest Defense From Enemy Attack

By Kevin McGran

Much can be learned of a country, its people and its culture from the quality of what it bears, via satellite, to the world and to the far reaches of Outer Space. Yes, Leave It To Beaver and My Three Sons, fine symbols of the quality of life on Earth, are being beamed to short green men with antennae.

I am a firm believer in intelligent life elsewhere in the universe (although I’m not too sure there’s any in Guelph) but I also believe that they will neither visit nor invade this planet. Let me tell you why.

Game Shows.

Now, you might think I’m crazy. You might be thinking that you saw what had to be an alien being on the Dating Game. You’re probably saying, “C’mon Insomniac, stop kidding yourself. What creature, human or otherwise, wouldn’t be lured to Hollywood with the promise of large cash prizes and a trip for two to the romantic hotspots of Iowa, for the simple price of total humiliation in front of the world, nay the Universe?”

But I don’t think this is bad. In fact, Game Shows, one of the reasons why the U.S. is looked on as a cultural wasteland, are perhaps, the base for democracy and free enterprise. As long as there are game shows, Earth is safe from invasion.

Higher intelligent beings don’t want anything to do with Pax Sajak and Vanna. (This includes aliens as well as Europeans).

People who want culture, who hate Game Shows, are, for whatever reason, boring. They can’t stand the excitement and emotion that It’s Tick Tack Dough. They don’t feel the anguish of bankruptcy of Wheel of Fortune. They can’t comprehend the strategy in bidding one dollar more than your opponent on Price Is Right. Nor do they comprehend the pure intrinsic beauty of picking the player who yells “Jackpot” when the booty hits $725.00. (Don’t we lucky to be so close to the U.S. so that we can have the best of both worlds).

This type of quality programming is being scoffed at, yes, I say ‘scroffed at’ by people in France. Of course, it’s being ignored by PBS and TVO. This type of high class entertainment is simply not available in other countries, nay, other galaxies.

Game Shows are the brainchild of Democracy. No enemy would want to try to overthrow a country, a culture, that produces such a thing. They view Game Shows and they fear them. (Let us hope that a war of Game Show Escalation does not begin and we will never find it necessary to have Game Show Reduction Talks).

As long as our enemies (here on Earth, or in suburban universes) witness, via satellite, the strong stage presence of Wink Martendale, et al. Perhaps the most breathtaking shots are those taken during the couple’s flight in Denys’ newly acquired aircraft.

Almost 10,000 extras were used during the course of the film, creating a very eclectic force. Over 7250 Africans and Asians and 2100 Europeans were used as extras, many wearing authentic costumes and jewellery.

Sydney Pollack, producer and director of Out Of Africa claims that the film was a difficult one to make. Not only was there a language barrier to overcome, due to the use of the natives, but also there was a problem with the interpretation of the story.

“It’s never been an easy picture to solve; there’s not much narrative drive,” explains Pollack in the production notes. “It’s a pastoral, a beautifully formed memoir that relied on her prose style, her sense of poetry and her ability to discover large truths in very small, specific details. That’s difficult to translate to film.”

Whether or not all the difficulties were worked out is uncertain, but what one can be sure of is that the finished product is nonetheless an award winning film.

---

**Streep Is Into Africa**

Life is further shattered when she discovers that she has contracted syphilis and will be unable to bear children.

Karen is now alone, responsible for the management of a large coffee plantation which she must oversee. It is in this context that the couple is forced to rely on her servant Farah (Malick Bowens) and adventurer Denys Finch Hatton (Robert Redford) whom she falls in love with, only to lose him later in a tragic airplane crash.

The picture is in the story of a brave woman and how she struggled to survive in a brutal and harsh environment. Loss is always prevalent in the story as Karen faces many hardships. Firstly is the loss or break-up of her marriage. Secondly, the loss of her motherhood as she learns she is unable to bear children. Thirdly is the loss of her lover Denys, who is killed in a plane crash and fourthly is the loss of her future as her entire coffee harvest is lost in a fire.

The film was shot almost entirely in and around Nairobi, which provides the viewer with some incredible panoramic views of Kenya’s wildlife and flora and fauna. Perhaps the most breathtaking shots are those taken during the couple’s flight in Denys’ newly acquired aircraft.

---

By Scott Anderson

Each Christmas the major film companies flood the market with movies in hopes of attracting the crowds and gaining huge profits at the box office. Universal Studios released Out Of Africa for just that purpose.

Out Of Africa is the story of the trials and tribulations of Dutch writer Karen Blixen in the early 20th century. The story begins in 1914 with Karen (portrayed magnificently by Meryl Streep) arriving in Kenya to begin a new life, married to her cousin Baron Bror Blixen (Klaus Maria Brandauer).

Baron Blixen went on ahead of Karen to Kenya with her mother’s money in order to invest it in raising cattle. Karen to Kenya with her husband’s promiscuity. Her death.

Karen is now alone, responsible for the management of a large coffee plantation which she must oversee. It is in this context that the couple is forced to rely on her servant Farah (Malick Bowens) and adventurer Denys Finch Hatton (Robert Redford) whom she falls in love with, only to lose him later in a tragic airplane crash.

Maple Lys And Fans Get Shafted

By J.L.

First of all, we wish to thank and humbly apologize to all those who threw their support behind the hockey team by purchasing, and selling, one dollar tickets for two buses to our game against Founders on Thursday, January 16. As is now well known, our game was cancelled due to a major screw-up at York North. Our organizer Don Ogden received notification of the cancellation at 12:50 p.m. on Thursday afternoon. This was after we had sold the majority of our ninety-six tickets to supportive and encouraging fans and friends. Everybody involved was extremely disappointed and frustrated by the turn of events, which were out of our control.

Where the Maple Lys should have been up at York North. Our organizer Don Ogden received notification of the cancellation at 12:50 p.m. on Thursday afternoon. This was after we had sold the majority of our ninety-six tickets to supportive and encouraging fans and friends. Everybody involved was extremely disappointed and frustrated by the turn of events, which were out of our control.

Coordinator and communication deficiencies on the part of York Main Inter-Collage Athletic directors.

Apparently, Founders College is on top at Sudbury for an annual tournament they've attended the last couple of years. The playoff schedule was set on December 5th and 6th. Founders didn't notify the league that they were going to be out of town on the game date, or the league was notified and there was just general lack of coordination and complete lack of communication in the before-mentioned office. Either way the end result was the game was cancelled and the plans of probably close to a hundred fans and players were drastically changed at the last minute. The situation and explanation given are absolutely unsatisfactory to everyone involved. There is absolutely no reason why any sports team at Glendon should be informed 9 hours before their due to play that their game is cancelled.

The situation is worsened when we know people had been making plans centered around the "Round Trip" to the York Ice Place, and all of -- which were destroyed by an administrative "mistake". Again, we're extremely sorry that this turn of events took place, but it really was beyond our control. It is another example of the disassociative relationship between York Main and Glendon when it comes to certain inter-college sports. The game itself being cancelled was secondary to the fact that people were planning an event. We as organizers can't help but feel some responsibility for the way things turned out. We probably win by default, depending on whether Founders protests or not, but that's no concession to the disappointment, frustration, and anger felt by those who were honestly looking forward to the evening. From the players perspective we anticipated a certain amount of electricity and ambiance in the arena which would motivate us towards an important and much-needed victory.

Nevertheless, the GCSU is continuing to throw their support behind us and they have made arrangements to have a bus or two (depending on the interest) going up our next game on Wednesday, January 22. The games at 9:15 p.m. against Strongy College and the bus(es) will be boarding at 8:30 p.m. in the Principal's Parking Lot. Anybody with tickets can either use them for the Wednesday game or turn them into the GCSU office for refunds. Once again we apologize for the inconvenience at the last minute, and the incompetency of others, and we would appreciate and be very grateful for any support in our upcoming game. Many thanks to our loyal supporters.

Alumni Hot In G.F.H.L. Action

By Hugh Mansfield

The Glendon Floor Hockey League has reached the half way point in the season with the Body Shop on top. This team, mainly composed of former Glendonites, has been on top since day one but recently has started to slump after a hot start. There are three teams tied for second all of which have displayed sound hockey but at an inconsistent level — partially due to a lack of players. Most of their losses have resulted from this poor turnout which could have been avoided by coordination and communication deficiencies on the part of York Main Inter-Collage Athletic directors.

Hurt these teams come playoff time. The Drakes have come on strong during the past weeks of action displaying tenacious fore-checking and overall good positional hockey, but their goaltending is still suspect. The biggest disappointment of the season, however, has to be the Brand A team. Although still young, lack of turnout, once again, has hurt the squad that many bookmakers had picked to win the division hands down. So much for predictions. Play was tuned for more G.F.H.L. action.
